

### **REMARKS**

The claims are 12-31, with claims 12, 13, 29 and 31 being independent. Claims 1-11 have been canceled from this application without prejudice or disclaimer. Support for claims 12-31 may be found throughout the specification and in previously presented claims. For example, support for claims 12-21 and 30-31 may be found in the specification at page 3, lines 1-2, in original claims 1-10 and in previously presented claim 11, which is supported in the specification at page 6, line 14. Support for claim 22 may be found in the specification at page 3, lines 17-20. Support for claim 23 may be found at page 4, lines 26-31 and page 7, lines 11-18. Support for claims 24-29 may be found at page 4, lines 32-38 and page 5, lines 3-7. No new matter has been added

For the avoidance of doubt, Applicant notes that, as set forth in the specification, "5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione" (or "Compound (I)") may exist in one of several tautomeric forms, as individual tautomeric forms or as mixtures thereof, all of which are encompassed by the terms "Compound (I)" or "5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione". Furthermore, 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione contains a chiral atom, and therefore can exist in up to two stereoisomeric forms. The term "5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione" (or "Compound (I)") also encompasses all of these isomeric forms, whether as individual isomers or as mixtures of isomers, including racemates. See the specification at page 5, lines 17-24. Accordingly, when reference is made to "Compound (I)", or to "5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione", or to "said 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione", all tautomeric and isomeric forms of the compound are intended to be encompassed.

Additionally for the avoidance of doubt, as set forth in the specification, when reference is made to scalar amounts, including mg amounts and % weight amounts, of "5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione, in a pharmaceutically acceptable form", the scalar amount referred to is made in respect of 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione per se: for example, 2 mg of Compound (I), or 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione, in the form of the maleate salt is that amount of maleate salt which contains 2 mg of 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-

dione (not: 2 mg of 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione maleate salt). See the specification, page 6, lines 9-13.

Accordingly, 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione, can be administered in any pharmaceutically acceptable form (for example, as the free base or as a salt or as a solvate or as a solvate of a salt, etc.), however, the amount of sensitizer administered is based upon the weight of 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione in the pharmaceutically acceptable form (e.g., the molecular weight of 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione maleate is 473.52 g/m, whereas the molecular weight of 5-[4-[2-(N-methyl-N-(2-pyridyl)amino)ethoxy]benzyl]thiazolidine-2,4-dione is 357.44 g/m).

Respectfully submitted,

Kathryn L. Sieburth
